

# Q-Pulse®

## View Assets Process

Your compliance management system requires you to identify all internal assets that have an impact on the quality of product you produce or the service that you provide.

When developing our **Asset management capabilities** in Q-Pulse it was our objective to:

- enable items of equipment that impact on the quality of products and services to be quickly identified
- ensure that a detailed historical record on all previous equipment checks is readily available for referral
- avoid the use of inappropriate items of equipment in your product or service provision
- allow a central searchable register of all assets to be easily viewed throughout the organisation
- enable staff to quickly and simply access the items of equipment relevant to their job role

The **Q-Pulse solution** meets each of the above objectives and in addition:

- ensures the real-time communication of all compliance actions throughout the organisation
- provides watertight security – restricting or providing access to the actions appropriate to each individual user
- is easily deployed – one window providing point of reference across the complete compliance management system
- is easy to use – one click away from accessing your compliance management tasks
